

Two Factor Authentication

Secure authenticated access to applications and online services for users via SMS

How does it work?

Our Two Factor Authentication solution provides organisations with a real-time, session based additional authentication factor for their web, IT or mobile applications by providing a one time pin number that is generated and sent to the user's mobile globally via SMS.

Features and Benefits

- ✓ Simple API for easy integration
- ✓ Easy to use web dashboard
- ✓ Real time reporting
- ✓ View message history and delivery status
- ✓ Real-time, session based 2FA
- ✓ Additional layer of security
