

A simple cost effective way to add SMS to your business and communicate with your customers via SMS

How does it work?

Email to SMS allows you to send and receive SMS messages from your application with no additional software to install or manage.

You simply compose a standard email message in the following format `+countrycodemobilenumbersms.yourdomain.com`. The email is received and converted by us into a SMS and sent directly to a mobile number or distribution list for your mobile contacts. The consumer is able to reply to the SMS message and this response is automatically converted into an email and sent back to the sender.

Features and Benefits

- ✓ No additional development required
- ✓ Real time & historical reporting
- ✓ Send to multiple recipients
- ✓ All SMS replies will arrive as emails
- ✓ Build a mobile & email customer database
- ✓ SMS forwarded to nominated email
- ✓ Multi Channel Engagement
- ✓ Email capture from SMS messages
