Web2SMS

A quick and cost effective method to communicate with your customers globally
How does it work?

Using our group of shared numbers, our Web app enables you to quickly and cost effectively send and receive messages. You can send up to 300 recipients in a single send, and store up to 1000 contacts online, and send from the web to anywhere in the world. There is also the option to view and forward sent and received messages.

From the web dashboard, you are able to manually enter your contact data or easily upload a CSV file containing the contact details of your recipients. From there you can maintain and manage contact details for individuals or groups.

OMNI → Text message sent → Consumer / Consumer / Consumer

Features and Benefits
